MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED 31 JULY 2019

TO OUR SHAREHOLDERS

This Management Discussion and Analysis (“MD&A”) supplements for Angkor Resources Corp. (“Angkor” or the “Company”), should be read in conjunction with the audited Financial Statements for the year ended 31 July 2019, which have been prepared in accordance with International Financial Reporting Standards (“IFRS”) as issued by the International Accounting Standards Board (“IASB”), consistently applied. This discussion includes the accounts of the Company and its subsidiaries, including:

- wholly-owned EnerCam Exploration Ltd. (“EnerCam Exploration”) (previously Prairie Pacific Mining Corp.), a corporation incorporated on 15 July 2018 and existing under the provincial laws of Alberta;
- wholly-owned Angkor Gold Cambodia Co. Ltd. (“AGC”), a corporation existing under the laws of the Kingdom of Cambodia
- wholly-owned Liberty Mining International Pty Ltd, a corporation existing under the laws of the Kingdom of Cambodia
- EnerCam Resources (Singapore) Pte. Ltd. (“EnerCam Resources”), which was incorporated in Singapore on 25 January 2019, owned 98% by EnerCam Exploration as at 31 July 2019, and 90% as at the date of this report.

Discussion of the Company, its operations and associated risks are further described in the Company’s filings, available for viewing at www.sedar.com. A copy of this MD&A will be provided to any applicant upon request.

FORWARD LOOKING STATEMENTS

Certain statements contained in the following MD&A and elsewhere constitute forward-looking statements. Such forward-looking statements involve a number of known and unknown risks, uncertainties and other factors that may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date the statements were made, and readers are advised to consider such forward-looking statements in light of the risks set forth in the Company’s filings and herein.

Additional information regarding the Company, including copies of the Company’s continuous disclosure materials is available through the SEDAR website at www.sedar.com.

The table below sets forth the significant forward-looking information included in this MD&A:

Forward-Looking Information	Key Assumptions	Most Relevant Risk Factors
Continued exploration of resource properties.	The exploration will reveal hydrocarbon and mineral resources increasing the value of the properties. The business of mining and exploration involves a high degree of risk and there can be no assurance that current or future exploration programs will result in profitable mining operations.	<p>The recoverability of intangible exploration and evaluation assets is dependent upon several factors. These include:</p> <ul style="list-style-type: none"> - The discovery of economically recoverable reserves; - The ability of the Company to obtain the necessary financing to complete the development of these properties; and - The ability to renew exploration licenses. <p>- Future profitable production or proceeds from disposition of mineral and oil and gas properties.</p>
The ability to raise capital in the future to continue on-going operations.	The Company will be able to raise capital as required.	<p>The Company has negative working capital and has incurred operating losses since inception.</p> <p>The Company has no source of revenue and is unable to self-finance operations.</p> <p>The Company has significant on-going cash requirements to meet its overhead requirements and maintain its resource interests.</p>

QUALIFIED PERSON

The technical and scientific information in this document has been reviewed and approved by Dennis Ouellette, B.Sc., P.Geo., a member of The Association of Professional Engineers and Geoscientists of Alberta (APEGA # 104257) and a Qualified Person as defined by National Instrument 43-101 (“NI 43-101”). He is the Company’s VP of Exploration on site in Cambodia.

ANGKOR RESOURCES CORP.

Canadian Dollars

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED 31 JULY 2019

CORPORATE OVERVIEW

Angkor Resources Corp. (“Angkor” or the “Company”) was incorporated under the laws of the Province of British Columbia, Canada on October 16, 2008 with its primary focus on resource exploration in Cambodia. Angkor’s five exploration licenses in the Kingdom of Cambodia cover approximately 983 km², which the Company has been actively exploring over the past 9 years. In early 2019, the Company announced its intention to pursue oil and gas opportunities in Cambodia, and subsequently announced in August 2019 that it had been granted government approval of its application for a new 7300 square kilometer oil and gas concession license to onshore Block VIII. The Company is currently preparing to negotiate a Production Sharing Agreement and commencing seismic and data review.

The Company is a reporting issuer in British Columbia and Alberta and trades on the TSX Venture Exchange under the symbol ANK. In 2019 the Company changed its name from Angkor Gold Corp. to Angkor Resources Corp. to reflect its addition of an oil and gas asset to its exploration portfolio.

As an exploration company, Angkor’s business model is to secure licenses to properties to investigate for resource potential. Initial exploration and investigation is generally conducted by the Company. Not all projects are given equal priority at all times, depending on the availability of exploration funding, the Company’s assessment of geological potential, and potential interest from third parties. Not all projects or licenses may be considered “significant” or “material” as those terms are defined in Form 51-102F1, although they may become so in the future depending on a number of factors, or conversely, may no longer be considered “significant” or “material” should they fail to meet expectations and the necessary criteria over time. As projects within the licenses show positive results through exploration, the Company may seek potential exploration and development partners to assist or fund further exploration by the Company with a view to further possible development. There is no fixed model for such arrangements with third parties but may generally include joint development agreements, funding agreements, earn-ins, partnerships, joint ventures and outright sale. To date, the Company has successfully concluded several third party funding agreements where the other company has fully or partially funded exploration on projects of interest in exchange for future rights. As part of funding, earn-in and other agreements, Angkor generally negotiates a carried interest for the Company, should a project be successful. Each agreement is negotiated on its own basis depending on the circumstances and specific terms may vary from agreement to agreement. The Company believes third party funding agreements benefit Angkor by reducing the need to go to public markets for capital financings that would result in greater shareholder dilution. The Company also believes that having multiple projects within a large license package with funding agreements with third parties may serve to reduce some of the risk inherent in resource exploration and development (see “Risks and Uncertainties” below).

HIGHLIGHTS, SIGNIFICANT EVENTS AND TRANSACTIONS

1) Financing and Corporate

What follows is a summary of activities of the twelve-month period ended 31 July 2019 related to financing and corporate operations. The activities disclosed have been the subject of press release(s) and are considered to be highlights of significant events and transactions. See Significant Events and Transactions subsequent to the year-end, for reporting on activities that fell between the year-end and the date of this report.

a) Angkor Announces Appointment of New Board Member

On 5 March 2019, the Company announced that Grant T. Smith, CPA, CA joined the Board of Directors of Angkor. Mr. Smith's management background extends over 25 years, with diverse operations and organizations, including York University and PricewaterhouseCoopers. He is a Chartered Professional Accountant and has over 15 years of experience in the accounting field. Mr. Smith was one of the founders and the senior partner of Clearline CPA, from which he has now retired.

b) Angkor Announces Appointment of New CFO

On 7 January 2019, the Company announced the appointment of Viktoriya Griffin, CPA, CA as its new CFO effective immediately.

2) Exploration

What follows is a summary of activities during the year ended 31 July 2019, deemed by management to relate to exploration. The activities disclosed have been the subject of press release(s) and are considered to be highlights of significant events and transactions. See Significant Events and Transactions subsequent to the year-end, for reporting on activities that fell between year-end and the date of this report.

a) Angkor Announces Expanded Drill and Exploration Program on its Banlung License

On 5 June 2019, Angkor announced the expansion of the drill and exploration program on its Banlung license. Under the Company's Earn-In Agreement with Hommy 5 Resources Inc. ("Hommy Resources"), the expanded program has ten diamond drill holes, totaling approximately 1100 metres of HQ3 large diameter core drilling, planned to test several targets identified in last year's shallow RC drilling program. The new diamond drill program will help to determine the extent of these mineralized structures, as well as their orientation and is expected to commence in June.

b) Angkor Announces Conclusion of Earn-In Agreement and Return To 100% Ownership of Oyadao South License

On 24 May 2019, Angkor announced the conclusion of the Company's 3-year Earn-In Agreement with Japan Oil, Gas and Metals Corporation ("JOGMEC") on Angkor's Oyadao South license. Angkor and JOGMEC announced on June 14, 2016 they had entered into a 3-year Joint Exploration Agreement ("JEA") to explore Angkor's Oyadao South license with up to USD \$3 million in exploration expenditures by JOGMEC over a 3 year period. In choosing to not proceed with additional exploration, under the Joint Exploration Agreement JOGMEC surrendered its option right to acquire up to 51% of Angkor's Oyadao South license, which returned to Angkor as a 100% wholly-owned exploration license. The Company will now pursue additional partners targeting precious metals and base metals on the license.

c) Angkor Announces It Is Pursuing Oil and Gas Opportunities In Cambodia

On 6 February 2019, Angkor announced that it was actively pursuing oil and gas opportunities in Cambodia in addition to its ongoing mineral exploration projects and is currently in discussions with Cambodia's oil and gas authorities regarding pursuing oil and gas concessions and available licenses. Subsequent to year end, Angkor announced (13 August 2019) that it, through its subsidiary EnerCam Resources Co. Ltd. ("EnerCam"), had received the approval of the Royal Government of Cambodia on its application for a 7300 square kilometer oil and gas license in Cambodia.

d) Angkor Announces The Discovery of A New Gold Anomaly at Banlung

On 12 December 2018, Angkor announced results from the mapping and sampling program on its Banlung Property. The Banlung Property has two primary targets – Okalla East and Okalla West. Highlights of grab sample results include:

- 13.95 gpt gold and 62.90 gpt silver
- 11.90 gpt gold and 6.90 gpt silver
- 10.85 gpt gold and 6.90 gpt silver

The samples with the highest gold values consisted of brecciated vein material with abundant semi-massive pyrite. Rockchip and grab samples are selected samples and are not necessarily representative of the mineralization hosted on the property.

**e) Angkor Announces USD \$3.65 Million Earn-In Agreement with Hommy Resources on Banlung Property**

On 19 September 2018, the Company announced that it entered into an Earn-In Agreement (the Agreement) with Canadian-based private company, Hommy Resources, on Angkor's wholly-owned Banlung property in north-eastern Cambodia. The Agreement was later revised on 11 April 2019.

The terms of the Agreement with Hommy Resources included a total investment by Hommy Resources of US\$3.3 million in exploration and development expenditures plus cash payments to Angkor of US\$350,000 over a 3-year period for Hommy Resources to acquire a 51% participating interest in the Banlung license. Angkor granted to Hommy Resources the sole and exclusive right and option to acquire up to an 80% participating interest in Angkor's Banlung license through the exercise of three milestones. After that, Angkor may maintain a 20% participating interest in the property through to production, or at Angkor's discretion, can convert to a 3.5% Net Smelter Return ("NSR") on all metals. Angkor is the operator on the project until Hommy Resources acquires a 51% participating interest in the Banlung license.

On 31 January 2019, Hommy Resources earned a 20% participating interest after the completion of the First Option since it had spent a total of USD \$500,000 in exploration and development expenses within one year on the Banlung license and a cash payment to Angkor of USD \$150,000.

The Second Option would give Hommy Resources the right to acquire an additional 31% for a combined total of 51% participating interest, by incurring exploration and development expenditures in the amount of US\$2,800,000 over specified milestones plus an additional USD \$200,000 cash payment to Angkor. Such exploration and development expenditures by Hommy Resources must be completed no later than the following schedule after the earning of the First Option:

Date		Amount
31 July 2019 or 180 days following the First Option (31 January 2019)	US\$	800,000
180 days after the first payment above	US\$	1,000,000
360 days after the first payment above	US\$	500,000
540 days after the first payment above	US\$	500,000

As of the date of these Financial Statements, the first milestone of US\$800,000 in exploration and development expenditures towards the Second Option by 31 July 2019 has not been completed, and Angkor and Hommy Resources are studying the results of the technical data. Either Hommy Resources or Angkor may choose to trigger the conversion to common shares further described below.

After Hommy Resources has earned the First and Second Options, Hommy Resources can elect to acquire an additional 29% Participating Interest by completing a Definitive Feasibility Study on the property before 7 March 2022.

If Angkor chooses to hold its 20% participating interest, Hommy Resources is required to fund Angkor's share of the cost of exploration and development, which Angkor has agreed to repay from future revenue from the property.

Either Hommy Resources or Angkor may choose to convert all of Hommy Resources' monies paid on account of acquiring a participating interest to common shares in Angkor at a fixed conversion price of \$0.25 per share. The conversion into shares must be for the full amount paid by Hommy Resources and may only be done once for the full amount. After the conversion, Hommy Resources shall have no further participating interest.

As at 31 July 2019, the Company had received a total of \$1,378,039 (US\$1,050,000) (31 July 2018 - \$Nil) from Hommy Resources, of which \$998,490 was recorded against the exploration and evaluation asset base for Banlung property. The remaining \$378,549 received was recorded as a liability, since the funds have not been spent on property expenditures as at year end.

f) Angkor Announces the Commencement of Drilling at Banlung

On 15 November 2018, Angkor announced the commencement of drilling on its Banlung Property. The drill program consisted of approximately 3250 metres of Reverse Circulation drilling ("RC") and Air-Core Drilling ("AC") on a linear gold anomaly within a previously identified alkalic intrusive complex at Okalla West. The anomaly to be tested is approximately two kilometres in length from north to south and some 1.5 kilometres wide from east to west. As well, mapping and a continuation of the auger sampling program proceeded, testing the south of the anomaly. An aerial survey was planned using state-of-the-art eBee drone equipment over both the Okalla East high sulphidation gold/porphyry copper target and the Okalla West low sulphidation epithermal gold target.

The announced drilling campaign at Banlung was part of a commitment by Hommy Resources to fund up to \$3.65MM USD of exploration work on the Property described below. Angkor's Banlung property includes the Okalla East high sulphidation gold/porphyry copper target and the Okalla West low sulphidation epithermal gold target.

g) Angkor Announces The Discovery of A New Gold Anomaly at Koan Nheak

On 8 August 2018, the Company announced the discovery of a new gold anomaly at the Koan Nheak license. The Peacock North discovery is a gold-in-soils anomaly which extends over 700 metres from north to south and up to 300 metres east to west at >10 ppb Au. It is located less than a kilometre north of the

Peacock South Prospect previously defined by Angkor, which extends over 1,400 metres from north to south and up to 400 metres east to west at >10 ppb Au.

SIGNIFICANT EVENTS AND TRANSACTIONS SUBSEQUENT TO THE YEAR END

The following material events occurred up to the filing date of this MD&A and subsequent to the year ended 31 July 2019.

1) Financing and Corporate

a) Angkor Subsidiary Raises USD \$1,000,000 Through Direct Share Sales

Angkor's subsidiary, EnerCam Exploration, has allocated up to 2.5 million of its original total shareholdings of 10 million shares of EnerCam Resources for sale at a price of USD \$1 per share in order to finance early stage start-up costs and exploration of the Block VIII oil and gas license. If the entire 2.5 million shares are sold, it would represent 25% of the outstanding shares of EnerCam Resources. These shares are not available to the public and are subject to several terms and conditions including limited buy-back rights, drag along, and anti-dilution provisions. There is no associated offering of Angkor's shares.

On 22 October 2019, the Company announced that Angkor's Canadian subsidiary EnerCam Exploration has raised USD \$1,000,000 to date, out of which \$273,497 (US\$207,800) US\$207,800 was received as at 31 July 2019, to advance Angkor's new Cambodian oil and gas license (Block VIII) through the private sale of shares of EnerCam Resources to various international accredited investors. Neither the shares of EnerCam Resources nor EnerCam Exploration are publicly traded. As a result of this transaction, EnerCam Exploration has a remaining 90% ownership of EnerCam Resources.

Funds will be used to pay licensing fees, acquire existing seismic and geological data, conduct field exploration and transact general operating expenses.

b) Angkor Announces Warrant Extension

On 4 October 2019, the Company announced the TSX Venture Exchange had consented to the extension in the expiry date of 1.9 million warrants issued originally pursuant to a private placement. The warrants, originally set to expire 3 October 2019 were extended to 3 October 2020. These warrants were issued pursuant to a private placement of 1.9 million shares with 1.9 million share purchase warrants attached at an exercise price of 35 cents, which was accepted for filing by the Exchange effective 3 October 2017.

**c) Angkor Announces Name Change**

On 4 September 2019, the Company announced a corporate name change to Angkor Resources Corp. effective 5 September 2019, to better reflect the Company's diversification into oil and gas assets in addition to its established mineral exploration projects. There is no change to Angkor's TSX-Venture Exchange symbol (TSXV:ANK). A new CUSIP number has been issued for Angkor Resources Corp. shares: CUSIP number 03476T105.

2) Exploration**a) Angkor Reports Results From Banlung Drill Program**

On 25 November 2019 the Company announced drill results from the Okalla West and Okalla East areas of its Banlung License. A short diamond drilling program of 966 meters in 10 holes was completed in the spring of 2019. Seven of the 10 holes were drilled on the Okalla West target and three on the Okalla East target of the Banlung tenement. The first five holes (OKW19-010D through OKW19-014D) were drilled in the vicinity of the best results returned from the earlier RC drilling program (OKW18-016RC). Four of the five holes returned greater than one gram per ton gold over one-meter sample intervals:

DD Hole_ID	From (m)	To (m)	Interval (m)	GPT Au
OKW19-010D	33.8	34.8	1.0	5.72
OKW19-011D	57.4	58.4	1.0	1.85
OKW19-012D	34.1	35.1	1.0	4.04
OKW19-014D	33.4	34.4	1.0	1.26

The one-meter samples contained narrow (4 to 25cm) veins or fracture sets. Only intervals with obvious veining or fracturing with visible sulphides were assayed. These results mirror the results obtained from the 2017 diamond drilling program located 950 meters to the north within the 2.5 km by 1.0 km prospective area.

b) Angkor Announces New Drilling Results From Koan Nheak Project

On 4 November 2019 the Company announced the results of a recent drill program at its Koan Nheak license undertaken by its exploration partner, Emerald Resources NL ("Emerald"). Exploration at Angkor's Koan Nheak license is carried out by Emerald's Cambodian subsidiary Renaissance Minerals (Cambodia) Ltd. ("Renaissance") under an earn-in agreement with Angkor announced 12 July 2017.

The RC drill program consisted of 15 collars on the gold-in-soil Peacock anomaly at Koan Nheak totalling 1,194 metres (m), drilled down to an average depth of 80 m at a 60° angle. It was intended to test the peaks of the gold-in-soil anomaly and the most prospective geophysical IP anomalies.

Ten of the 15 drill holes intersected zones of quartz breccia with sulphide mineralization. Each of these zones confirmed the existence of a gold mineralized system with the best intersection (8.0m @ 3.61 gpt Au) being hosted by the diorite intrusive. The significant drill intersections are set out in the table below:

RC Hole ID	From (m)	To (m)	Interval (m)	GPT Au
RC19PCK002	7.0	8.0	1.0	3.43
RC19PCK003	21.0	23.0	2.0	0.96
RC19PCK003	31.0	39.0	8.0	3.61
RC19PCK009	58.0	59.0	1.0	1.45
RC19PCK011	0.0	2.0	2.0	1.36

Intervals were determined by geological interpretation of consistent mineralized zones. Broader intervals may include waste intervals of up to 2 m. There was no evidence of nugget effect in the above results, and no results were topcut. True widths for the intervals above have yet to be determined.

The drill program confirmed the previously identified soil anomaly. The mineralization was observed to be hosted in a diorite intrusive, of a similar style to the sulphide mineralization of Emerald's nearby Okvau Gold Deposit. Additional drilling, scheduled to commence early next year, will further test the RC19PCK003 intersection northward along strike into the prospective diorite intrusive on the untested Peacock North gold-in-soil anomaly.

c) Angkor Announces Multiple Oil Seeps Documented on Angkor's New Block VIII License

On 8 October 2019, Angkor announced that it had received a report identifying a number of well-distributed oil seeps within and around the mapped Tertiary rift basins of Angkor's new Block VIII oil and gas license.

d) Angkor Receives Approval for Cambodian Oil And Gas License

On 13 August 2019, the Company announced that through its subsidiary EnerCam Resources Angkor received the approval of the Royal Government of Cambodia on its application for a 7,300 square kilometer oil and gas concession in Cambodia, designated Block VIII. With this approval, Angkor is now proceeding with the negotiation of the Production Sharing Agreement (PSA) with regard to the license. This approval also allows Angkor to pursue oil and gas exploration on Block VIII.

ANGKOR RESOURCES CORP.

Canadian Dollars

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED 31 JULY 2019

EXPLORATION SUMMARY

MINERAL PROJECTS:

Angkor's five mineral exploration licenses in the Kingdom of Cambodia cover approximately 983 km², which the Company has been actively exploring over the past 9 years. The Company has now covered all license areas with stream sediment geochemical sampling and has flown low level aeromagnetic surveys over most of the ground. Angkor has diamond drilled 21,855 metres in 190 holes, augured 2,699 metres over 737 holes, collected over 165,000 termite mound samples and 'B' and 'C' zone soil samples in over 20 centres of interest, over a combined area of more than 140 km², in addition to numerous trenches, IP surveys and detailed geological field mapping. License areas above are approximate. Individual licenses have various prospects contained within them as outlined below (see accompanying map).

Exploration activity, any plans for projects within the licenses and their status, and any known or anticipated costs to take the project to the next stage, are described by license area and prospect name below.

Okalla West Prospect, located on the Banlung License, and the Halo Prospect, located on the Oyadao License, were the only areas on which significant new exploration was conducted during the year.

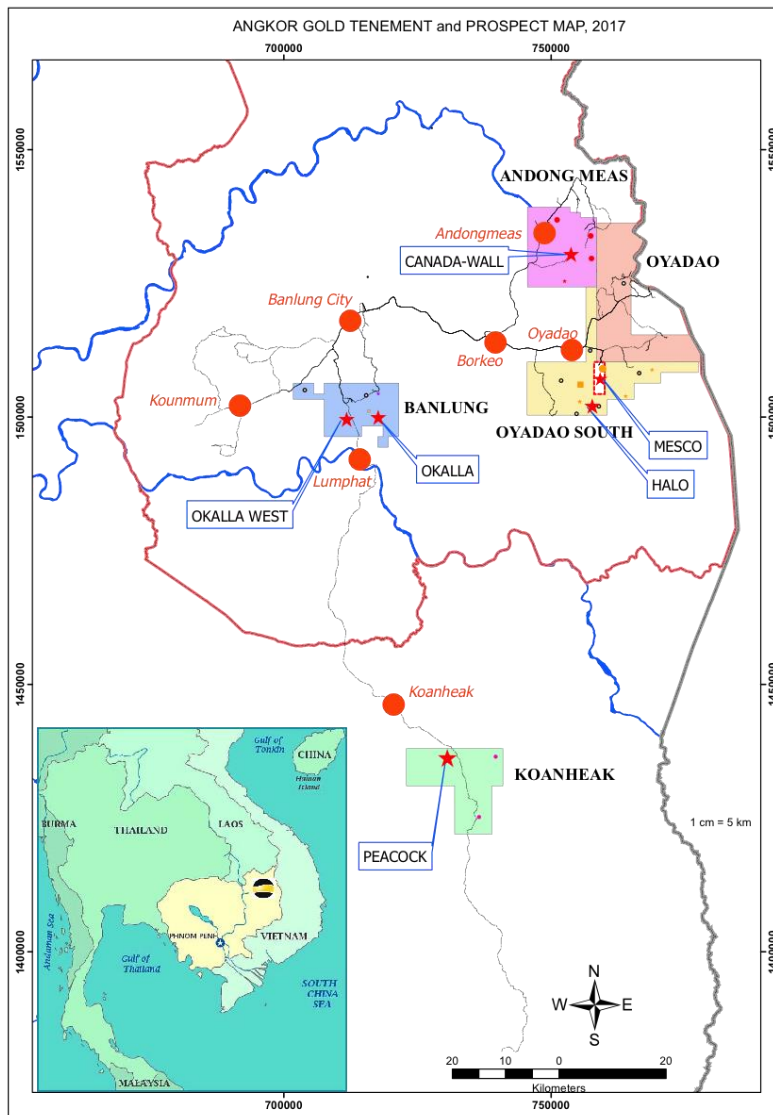

Figure 1: Project Location Map

1) Andong Meas License

Andong Meas is Angkor’s most northern license with an area of 187 km² and includes several prospects – Canada Wall Prospect, Wild Boar Prospect, Colonial Mine Prospect and South Creek Prospect. This license straddles the Sesan River. The Company believes there is significant potential and has had expressions of interest from several parties for these areas for further exploration.

ANGKOR RESOURCES CORP.

Canadian Dollars

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED 31 JULY 2019

On 21 June 2018, the Company announced results of exploration at Wild Boar and Wild Monkey prospects at Andong Meas, which included:

- Multiple grab samples from Wild Boar returned gold values of up to 20.6 gpt;
- Completed geological mapping and prospecting program at Wild Monkey with the Institute of Technology of Cambodia (ITC);
- Evidence of multiple mineralized epithermal quartz veins; and,
- Evidence of skarn type alteration in the Wild Monkey prospect.

Significant grab sample results include:

Sample ID	Gold (gpt)	Silver (gpt)
V035612	20.60	9.15
V035613	19.45	3.50
V035609	17.65	8.44
V035614	17.60	9.92
V035606	9.24	14.95
V035605	8.55	7.57
V035604	3.98	1.61
V035603	2.74	0.16
V035584	0.48	4.15
V035583	0.34	67.70
V035582	0.28	35.90
V035581	0.22	33.90

Three geology students from the Institute of Technology of Cambodia (ITC) are working with Angkor Resources' senior Cambodian Geologist to complete their field school and thesis requirements by mapping a 24 square kilometre section of ANK's Andong Meas tenement. The area to be mapped has not

yet been examined in detail by Angkor's geological staff, so both the Company and the students will benefit from this cooperative venture.

The Andong Meas tenement hosts the Company's Canada Wall copper-molybdenum-gold porphyry system and the adjacent South Creek copper porphyry system prospect, as well as several gold targets including the Wild Boar which has seen extensive artisanal mining in the past.

There are no finalized plans for projects within this license or any known or anticipated costs to take the projects to the next stage. They remain available for prospective future development by potential third parties in cooperation or partnership with the Company through earn-in, royalty, funded-exploration or other types of revenue-generating agreements. In the interim, the license is maintained, secured, and regularly monitored. In March 2017, Angkor received a 3-year renewal of this license.

Over the next year, the budgeted costs associated with this license including renewal, training, environmental and land rent, are approximately \$170,100 (USD\$127,600) for security, maintenance, and government licensing costs. The Company intends to explore further in 2019-2020 and is seeking a partner interested in precious metal exploration and discovery.

2) Banlung Exploration License

The tenement covers a mixed farming area, straddling the new paved highway from Banlung to the old provincial capital Lumphat, and then south through Koan Nheak to Sen Monorom.

Angkor renewed the license for the Banlung Tenement in March 2017 for a period of three years, with an option to extend for an additional four years.

The presence of the 7,000m (N-S) by 2500m (E-W) "Central Gabbro" intrusive body was first recognized in 1970 and again in the 1990s. This was corroborated by an aeromagnetic survey over the tenement and a satellite image geological interpretation, with limited ground ascertainment completed in 2007. A stream sediment geochemical survey conducted that year suggested that the intrusive could host base metals and gold. Several traverses were made through the area in 2009 and 2011, with some pilot termite geochemical surveys completed in 2013. Subsequent mapping has shown that the "Central Gabbro" is actually an alkalic ultramafic to intermediate intrusive complex.

a) Okalla East and Okalla West Prospect:

On 25 November 2019 the Company announced drill results from the Okalla West and Okalla East areas of its Banlung License. A short diamond drilling program of 966 meters in 10 holes was completed in the spring of 2019. Seven of the 10 holes were drilled on the Okalla West target and three on the Okalla East target of the Banlung tenement. The first five holes (OKW19-010D through OKW19-014D) were drilled in

the vicinity of the best results returned from the earlier RC drilling program (OKW18-016RC). Four of the five holes returned greater than one gram per ton gold over one-meter sample intervals:

DD Hole_ID	From (m)	To (m)	Interval (m)	GPT Au
OKW19-010D	33.8	34.8	1.0	5.72
OKW19-011D	57.4	58.4	1.0	1.85
OKW19-012D	34.1	35.1	1.0	4.04
OKW19-014D	33.4	34.4	1.0	1.26

The one-meter samples contained narrow (4 to 25cm) veins or fracture sets. Only intervals with obvious veining or fracturing with visible sulphides were assayed. These results mirror the results obtained from the 2017 diamond drilling program located 950 meters to the north within the 2.5 km by 1.0 km prospective area.

On 24 October 2017, the Company reported results of its diamond drilling program on its Okalla projects. Drilling commenced on 2 July 2017, on the Okalla West and Okalla East prospects. The two prospects are approximately seven kilometres apart. Both are hosted by intrusive rock complexes connected along a regional structural corridor. Phase 1 drilling was conducted to determine the structure and type of mineralization of the targets over a gold anomaly devoid of outcrop.

Highlights of these results included:

- 562.2m of drilling completed, with 439.2m at Okalla West and 123.0m at Okalla East.
- Drilling confirmed the existence of gold veins in faults at Okalla West.
- Okalla West hole OKW17-003D returned 2.05 gpt Au (gold) and 4.55 gpt Ag (silver) over 1.65 metres at 45.35m.
- Okalla West hole OKW17-005D returned 6.17 gpt Au and 8.2 gpt Ag over 0.75m at 39.6m.
- Rocks within the intrusive complex at Okalla West were alkaline in nature indicating that gold mineralization would likely be related to alkaline magmatism.
- Okalla East hole BL17-048D returned 0.88 gpt Au and 0.14% Cu (copper) over 10.0m from 26.0m to 36.0m.
- Okalla East hole BL17-049D has one significant intercept from 32 to 37 metres. The 5m run returned a weighted average of 0.31 gpt Au with 0.25% Cu.

Previously, on 8 May 2017, Angkor announced the results of samples collected during the test pit exploration program on Okalla West. The program was focused on a surface gold geochemical anomaly with dimensions of about 600 meters by 300 meters. The analysis of near surface samples using a screened

metallic process indicated a north trending gold anomaly of at least 320 metres in length and 45 metres in width. The gold anomaly is located over diorite intruding gabbro.

The above test pit results from Okalla West indicated positive results on surface, reflecting a bedrock hosted system just beneath. The program involved the excavation of pits approximately 1X2 metres in size, and dug through to the bottom of the deeply weathered surface layer. Samples were collected for pan concentration testing and for metallic screen analysis. Pit 14 on Line 5 returned the highest metallic screen assay at 2.09 gpt Au. This suggested that there could be multiple parallel fault structures hosting gold veins.

Auger drill sampling at the Okalla West prospect on a regional scale continued through April 2017 with an additional 644 holes drilled and 785 samples collected. The regional auger hole work tested previously identified gold in termite anomalies. An auger hole was drilled from the bottom of each pit as deeply as possible to identify the underlying geology and to sample the bedrock. The deepest auger hole completed was 9.2 meters. Samples from the auger holes were submitted for gold assay and multi-element analysis.

Quartz vein material from the pits near, or within the north trending anomaly returned highly anomalous results for gold. The vein material displayed at least three phases of quartz mineralization. The first phase was massive, white quartz and returned 0.18 gpt Au (Sample S103564). The second phase consisted of white and grey quartz breccia with abundant pyrite and returned 2.32 gpt Au (Sample S103475). The third phase consisted of grey microcrystalline quartz in breccia with abundant pyrite. It returned 11.5 gpt Au (Sample S103456). Several larger quartz vein float pieces on line 5 contained visible gold. The multiple phases of quartz and sulfide brecciation and deposition with visible gold indicated a typical structurally controlled “crack and seal” system of gold mineralization.

A shallow drilling program in 2018 was intended to test and map near surface mineralization and better understand underlying structures. The drilling targeted gold-in-soil anomalies previously outlined by previous termite mound sampling and further defined by auger sampling in 2016 and 2017 at the Okalla West prospect on the Banlung license. The RC drilling intercepted many one to greater than 5 metre zones of fractured bedrock with pyrite and some base metal sulphide mineralization, with low grades of gold mineralization above the bedrock.

Near vertical AC holes through overburden were as short as 5 metres and some almost 30 metres in depth but averaged 10 metres in depth. The AC holes were very useful for determining underlying bedrock but tested only a few centimetres of the bedrock. RC holes were drilled at an incline of 60 degrees with target depths of 60 metres. The drilling was completed on widely spaced lines covering several large target areas, namely Okalla South, Okalla North, and Copper Hill. Other undefined areas with anomalous in-soil gold and base metal values of no known provenance were also tested. Best gold returned from the RC drilling was 1.2 grams per tonne gold over four metres, including one meter of 2.50 gpt gold.

The Company along with Hommy is currently reviewing the overall exploration results to determine what, if any, next steps are merited by the results. The upcoming annual costs for licensing and renewals is budgeted to be about \$145,300 (USD\$109,000).

3) Koan Nheak Exploration License

Koan Nheak license is the Company's only license in Mondulkiri province, which is due south of Ratanakiri province and the other 4 licenses. The Koan Nheak license is 189 km², mostly flat terrain in a light deciduous forest area. The tenement straddles the new paved highway from Banlung via Lumphat to Sen Monorom. In March 2017, Angkor received a 3-year renewal of this license.

On 12 July 2017, the Company entered into a Definitive Earn-In-Agreement with Australian-based gold company, Emerald, on the Company's wholly owned Koan Nheak property in North-Eastern Cambodia.

On 20 September 2017, the Company received the approval of the Cambodian Ministry of Mines and Energy to proceed with its joint project with Emerald's subsidiary, Renaissance, on the Koan Nheak property. This approval allowed Angkor and Renaissance to proceed with their joint exploration plans of Koan Nheak under their Definitive Earn-In Agreement dated 12 July 2017.

The agreement was later amended on 1 May 2018, primarily extending the terms of the agreement. Under the Agreement, Renaissance will spend a total of US\$2 million in exploration and development expenditures plus a US\$255,000 cash payment to the Company for Renaissance to acquire a 51% participating interest in the Koan Nheak license through First and Second Option.

First Option requires US\$445,000 exploration and development expenditures to be incurred by Renaissance no later than 7 February 2020 and US\$55,000 cash payment made to the Company. First Option acquires 0% participating interest. As at 31 July 2019, Renaissance incurred a total of US\$221,000 in exploration and development expenditures.

After completion of the First Option, Second Option may acquire a 51% participating interest by incurring US\$1,500,000 exploration and development expenditures and an additional US\$200,000 cash payment to the Company no later than 1 March 2021.

Upon completion of the First and Second Options, Renaissance has the right to acquire an additional 29% participating interest by completing a definitive feasibility study no later than 7 March 2022, and Renaissance will then hold an 80% participating interest. After that, the Company may maintain a 20% participating interest in the property, or at the Company's discretion, can convert it to a 3.5% Net Smelter Return on all metals.

Renaissance is the operator on the project throughout, responsible for the planning and execution of exploration at Koan Nheak, as well as the budgeting of the exploration and development funds of US\$2 million. Renaissance undertook an Initial Environmental Impact Assessment (IEIA) on the property, which was approved, but delayed exploration activities, and as a result, the Company and Renaissance amended the agreement on May 1, 2018 to allow for exploration timelines on the second option of the agreement to be extended to 1 March 2021 mentioned above.

As at the date of this report, the agreement is in good standing.

a) Peacock Prospect:

As a result of the Definitive Earn-In-Agreement with Emerald announced on 12 July 2017, Emerald, through its Cambodian subsidiary Renaissance, is responsible for any exploration plan and budget. Emerald completed a preliminary wide spaced soil sampling program over the area previously identified by Angkor Resources. The shallow soil sampling program was conducted at 400 metre centres and resulted in the definition of a gold in soil anomaly 1000m by 400m. An infill phase 2 sampling program began in January, 2018.

On 4 November 2019, the Company announced the results of a recent drill program at its Koan Nheak license undertaken by its exploration partner, Emerald. Exploration at Angkor's Koan Nheak license is carried out by Emerald's Cambodian subsidiary Renaissance under an earn-in agreement with Angkor announced on 12 July 2017 and amended further on 1 May 2018 as discussed above.

The RC drill program consisted of 15 collars on the gold-in-soil Peacock anomaly at Koan Nheak totalling 1,194 metres (m), drilled down to an average depth of 80 m at a 60° angle. It was intended to test the peaks of the gold-in-soil anomaly and the most prospective geophysical IP anomalies.

Ten of the 15 drill holes intersected zones of quartz breccia with sulphide mineralization. Each of these zones confirmed the existence of a gold mineralized system with the best intersection (8.0m @ 3.61 gpt Au) being hosted by the diorite intrusive. The significant drill intersections are set out in the table below:

RC Hole ID	From (m)	To (m)	Interval (m)	GPT Au
RC19PCK002	7.0	8.0	1.0	3.43
RC19PCK003	21.0	23.0	2.0	0.96
RC19PCK003	31.0	39.0	8.0	3.61
RC19PCK009	58.0	59.0	1.0	1.45
RC19PCK011	0.0	2.0	2.0	1.36

Intervals were determined by geological interpretation of consistent mineralized zones. Broader intervals may include waste intervals of up to 2 m. There was no evidence of nugget effect in the above results, and no results were topcut. True widths for the intervals above have yet to be determined.

The drill program confirmed the previously identified soil anomaly. The mineralization was observed to be hosted in a diorite intrusive, of a similar style to the sulphide mineralization of Emerald's nearby Okvau Gold Deposit. Additional drilling, scheduled to commence early next year, will further test the RC19PCK003 intersection northward along strike into the prospective diorite intrusive on the untested Peacock North gold-in-soil anomaly.

Previous detailed geological mapping, SWIR clay alteration studies, termite mound geochemical and VLF-EM geophysical surveys that followed up promising results from previous operations outlined an 800m long strike of anomalous pan-concentrated gold associated with quartz veining on the southern edge of a diorite intrusive. This lies between the diorite and a quartz vein stock work with limonite and pyrite in sandstones to the south of the anomaly. Assay values from vein float and outcrop in this area confirmed the gold concentration.

Previous work (see press release dated 15 August 2016) at the Peacock Prospect reported surface values up to 31.8 g/t gold. The work program was conducted over six months, targeting the priority prospects on the Koan Nheak license covering 34.5 km² of mapping, 15.5 km² of surface geochemistry, and 20 km² of IP surveys over the Peacock prospect area. The interpreted result is a north-south structurally complex, anomalous gold corridor, epithermal vein system, related to the Peacock intrusive diorite and Lockett fault. To the immediate south of the Peacock intrusive diorite, within the structural corridor, is a newly identified 1250m x 750m zone of intense quartz veining. This zone extends south along the Lockett fault zone into the sandstones, siltstones and limestones with evidence of strong limonite oxidation, quartz veinlets at surface and assay values ranging from zero up to 1.85 g/t gold.

Renaissance conducted a preliminary program consisting of shallow soil sampling at nominal spacing of 400m line spacing by 400m along line intervals in the main prospect area, and 800m line spacing by 400m along line spacing in the surrounding area. The sampling targeted thin "laterite" soil horizons to establish the geochemical background and anomalous threshold for the sample media in the project area, as well as identify the extent of the geochemical anomaly footprint at the Peacock Prospect.

Infill auger soil sampling was undertaken at 100m spacing along line intervals across the central part of the surface geochemical anomaly identified by the broad spaced shallow soil sample lines. The infill auger soil program was designed to provide a preliminary assessment on possible bedrock mineralization source, extent and structural controls for gold and other element anomalies near surface and provide additional geological mapping data beneath extensive shallow lateritic soil cover.

The results support the presence of a fault related, gold anomalous epithermal vein system on the south to south-southeast of the mapped intrusion at the Peacock Prospect.

A follow-up program of auger sampling was completed on the prospect during the first quarter of 2018. The program consisted of infill auger samples taken across the core of the surface geochemical anomaly previously identified by Angkor. During the recent program, additional auger soil samples infilled the Peacock prospect to a 50 x 50m grid on the southern anomaly and 100m x 100m grid on the northern anomaly. To date 596 auger samples have been taken from the Peacock prospect. The program resulted in the discovery of a new gold-in-soils anomaly.

The new Peacock North discovery is a gold-in-soils anomaly which extends over 700 metres from north to south and up to 300 metres east to west at >10 ppb Au. It is located less than a kilometre north of the Peacock South Prospect previously defined by Angkor Resources, which extends over 1,400 metres from north to south and up to 400 metres east to west at >10 ppb Au.

Emerald is currently planning a preliminary drill program to test the anomalies.

b) East Ring Prospect:

No field work was conducted on this project since the period ended 30 April 2017 and is not considered a high priority target at present. There are no estimated anticipated timing or costs at this time over and above regular maintenance.

4) Oyadao North Exploration License

The Oyadao North license is 222 km², connects directly north of the Oyadao South license and borders the north end of Phum Syarung. As reported above, in March 2017, Angkor received a 3-year renewal of this license. This license was under option to Mesco Gold (Cambodia) Ltd. ("Mesco"); however, the conditions of that option were not met and the Company took over this license. Angkor has initiated exploration with mapping, geochemistry, and definition of drill targets. Further exploration including drilling is planned by early 2020.

Over the next year, as license renewals, land rental, and training and inspection fees become due, the budgeted costs for Oyadao North are approximately \$166,500 (USD\$124,900) for security and maintenance, and government licensing costs.

5) Oyadao South Exploration License

The Oyadao South license is approximately 235 km² in size and is located in rolling, rugged terrain, accessible by road, but more challenging areas are somewhat limited during heavy rainfalls due to water

flow in seasonal streams. In March 2017, Angkor received a 3-year renewal of this license, which includes the Halo Prospect.

The Oyadao South license was under a funding agreement with Japan Oil, Gas and Metals Corporation (“JOGMEC”), which committed a total investment of US\$3 million in exploration expenditures by JOGMEC over a 3 year period, effective 29 March 2017. Angkor was the operator under the Joint Exploration Agreement (“JEA”) with JOGMEC (see press release of 30 March 2017). On 24 May 2019, the Company announced the end of the Company’s 3-year Earn-In Agreement with JOGMEC on Angkor’s Oyadao South license. In choosing to not proceed with additional exploration, under the Joint Exploration Agreement, JOGMEC has surrendered its option right to acquire up to 51% of Angkor’s Oyadao South license, which now returns to Angkor as a 100% wholly-owned exploration license for its own exploration or potential new funding / exploration partners.

While previous exploration by Angkor at the Oyadao South license returned near and at surface gold results, JOGMEC’s primary interest has been in copper, particularly targets around the Halo copper porphyry where the Company successfully drilled into a mineralised copper porphyry. After completion of its exploration program, JOGMEC has determined that the copper system at Halo is not of sufficient size to meet the requirements of its mandate to proceed.

a) Halo Prospect:

On 19 October 2017, the Company provided an update on the diamond drill and Induced Polarization (IP) geophysics programs at Halo on Angkor’s Oyadao South license in conjunction with its exploration partner, JOGMEC. The first phase of the diamond drilling and IP at Halo was completed, with a total of 1,578 m of drilling in four holes, 41.6 km of surface IP lines, downhole IP on all four completed drill holes, and IP core testing on 157 samples from all four drill holes.

Highlights of Phase 1 program results included:

- All of Phase 1 diamond drilling and IP programs at Halo are now complete.
- Results from HAL17-001D showed an intercept of 2345 ppm Cu, 1.34 g/t Ag, and 261.4 ppm Mo over 88.9m including an intercept of 8043 ppm Cu, 2.24 g/t Ag, and 320.7 ppm Mo over 7.9m.
- Results indicated the existence of previously unknown copper-molybdenum porphyry systems at Halo.
- Results from HAL17-004D showed no significant results from the analysis of the core.
- The Phase 2 exploration program in Oyadao South includes additional diamond drilling at Halo, targeting IP anomalies and expanded regional exploration onto additional magnetic and geochemical anomalies in Oyadao South.

Drill hole HAL17-001D results represent mineralization found away from but likely connected to the centre of the mineralized porphyry system. All the drill holes intercepted alteration and veining associated with porphyry systems.

Phase 2 drilling commenced on 31 January 2018. The program consisted of three holes: HAL18-005, HAL18-006 and HAL18-007 were step-out holes from the drilling of the previous season. The holes tested structural and surface geochemical anomalies. By February of 2018 three additional holes were completed on Halo, totaling 1,199.2 meters. No significant results were obtained from the analysis of the core.

Baseline security, renewals, land rentals and environmental permitting costs on the license are budgeted to be \$82,200 (USD \$61,700) over the next year.

Regional exploration to the west and east of the Halo occurrence included auger and termite mound sampling. Block C termite mound sampling and mapping resulted in the collection of 2838 termite samples and 198 rock samples.

b) Otray Prospect:

The Otray Prospect within the Oyadao South license has been previously explored and mapped using the interpretation of 4581 termite mound samples formerly collected from the Oyadao South License and tested for pH. This prospect is of lower priority to the main work being planned for the exploration of the Halo Prospect. Portions of the Otray Prospect will be examined for porphyry style alteration and mineralization similar to that found on the adjacent Halo Prospect. This is expected to be included in the regional exploration program.

Maintenance of Licenses

In 2017, the Cambodian Ministry of Mines and Energy (“MME”) introduced a new sub-decree for exploration and exploitation licenses. Under this sub-decree, exploration licenses are granted for an initial 3-year exploration period followed by two terms of two years each for continued exploration. The Company’s five licenses were renewed under the terms of the new sub-decree to the Mining Law.

Annual rental fees, training fees, and inspection fees are part of the maintenance program. Exploration reports are required by MME on each license on an annual basis. The Company’s five licenses are in good standing. The Company had successfully renewed five exploration licenses in March 2017 for an initial three-year term, with the option to extend a further four years.

The physical maintenance of the licenses requires ongoing security of any camp structures in periods of inactivity, regular reconnaissance, and general minimal technical operations. Social development activities are considered part of exploration-related activities and continue on each project through both rainy and dry seasons.

OIL & GAS PROJECTS:

In August 2019, Angkor announced that it had received approval of its previously announced license application for Block VIII, a 7,300 square kilometre oil and gas concession in Cambodia and is proceeding with the negotiation of the Production Sharing Agreement (PSA) with regard to the license (see accompanying map).

During the year ended 31 July 2019, the government of Cambodia approved Angkor's application for the exploration and development of Petroleum Block VIII through its subsidiary, EnerCam Resources.

During the year ended 31 July 2019, the Company contributed to upcoming license fees for the oil and gas license in the amount of \$98,865 (US\$75,000). Now the Company awaits the completion of the PSA negotiations for determination of the terms and conditions of the oil and gas license and final fee structure.

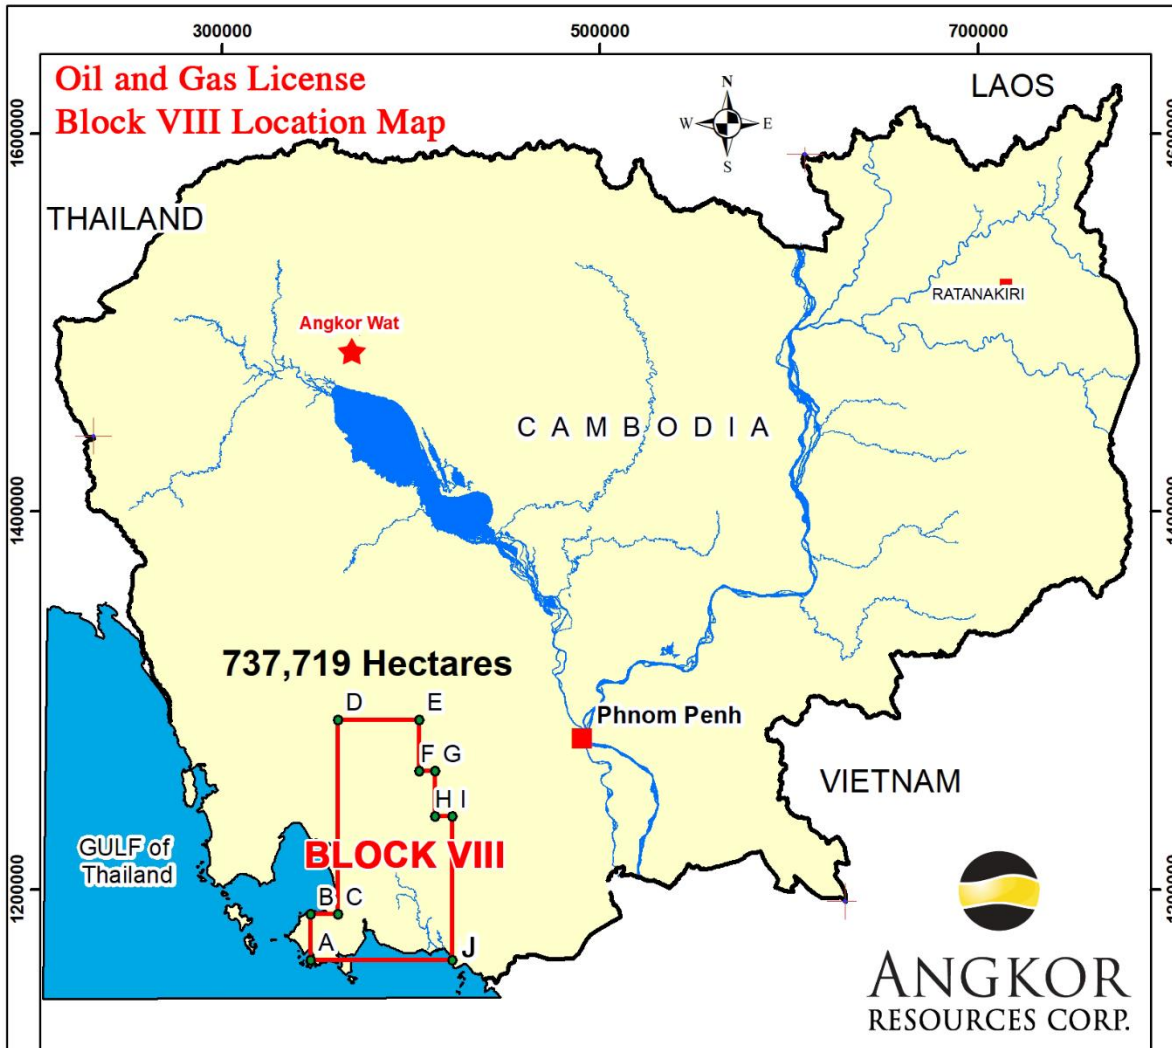

On 8 October 2019, Angkor announced that it had received a report identifying a number of well-distributed oil seeps within and around the mapped Tertiary rift basins of Angkor's new Block VIII oil and gas license. The report, authored by John C. Menzies, BSc., FSEG, FGSL, FAIG of Cmi Capital Limited ("Cmi"), identified and documented 21 separate surface oil seeps and occurrences. Two of these seeps were sampled using industry standard techniques and the samples were submitted to Schlumberger Limited, Dubai for gas chromatography–mass spectrometry (GC-MS) and biomarker analysis and interpretation. Results from Schlumberger showed that samples contained hydrocarbons of thermogenic origin (i.e. liquid hydrocarbon as generated at depth from mature source rocks that had migrated to surface).

Angkor's independent field research conducted by Lorne Rosenthal (Ph.D. Geol.) indicates that Block VIII is host to a newly recognized and completely unexplored foreland sedimentary basin related to the Bokor-Elephant Mountain compressional fold and thrust belt, which may contain multiple prospective reservoir zones of Carboniferous, Permian, Triassic and Cretaceous age. In addition, there are a number of younger rift basins of Tertiary age associated with regional Cenozoic strike-slip faulting.

ANGKOR RESOURCES CORP.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED 31 JULY 2019

Name	X	Y
A	346694	1162500
B	346694	1186610
C	361105	1186610
D	361105	1289540
E	404126	1289540
F	404126	1262430
G	412793	1262440
H	412793	1238450
I	421990	1238450
J	421990	1162510

Projected Coordinate System: WGS1984_UTM_Zone48N
Projection: Transverse_Mercator

RESULTS OF OPERATIONS

The comprehensive loss for the year ended 31 July 2019 was \$1,623,423 compared to a comprehensive loss of \$1,592,963 in the comparative period. The main fluctuations in costs are as follows:

Salaries, wages and benefits (rounded to the nearest '000)	12 months 2019	12 months 2018
	\$ 394,000	\$ 528,000
Variance	(134,000)	

The decrease in salaries, wages and benefits for the year ended 31 July 2019 results from careful resource management in Cambodia. In particular, technical wages and general wages have been optimized further as the Company focuses on its active projects. The decrease in salaries, wages and benefits is also a result from the effort to reduce monthly expenses.

Share-based compensation (rounded to the nearest '000)	12 months 2019	12 months 2018
	\$ 162,000	\$ 26,000
Variance	136,000	

In the current year, the Company granted options to directors, officers, and consultants of the Company to align them with the long-term goals of the Company; these options vested immediately. Some options granted in the prior year are vesting 2 years from the date of grant.

SUMMARY OF ANNUAL RESULTS

The following table summarizes selected financial data for the Company for each of the three most recently completed financial years. The information set forth below should be read in conjunction with the consolidated audited financial statements, prepared in accordance with International Financial Reporting Standards and Canadian generally accepted accounting principles as applicable

Fiscal Year Ended	July 2019	July 2018	July 2017
Total Revenues	\$ -	\$ -	\$ -
Loss and Comprehensive Loss for the Year	\$ (1,730,710)	\$ (1,961,661)	\$ (3,941,199)
Loss per Share (Basic and Diluted)	\$ (0.02)	\$ (0.02)	\$ (0.04)
Total Assets	\$ 6,607,600	\$ 7,260,277	\$ 7,258,722
Long-Term Financial Liabilities	\$ 1,368,143	\$ 956,697	\$ -

ANGKOR RESOURCES CORP.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED 31 JULY 2019

SUMMARY OF QUARTERLY RESULTS

The following table sets out selected unaudited quarterly financial information of the Company and is derived from the unaudited condensed interim consolidated financial statements prepared by management. The Company's unaudited condensed interim financial statements are prepared in accordance with International Financial Reporting Standards and are expressed in Canadian dollars.

Three Months Ended	July 2019	April 2019	Jan 2019	Oct 2018	Jul 2018	April 2018	Jan 2018	Oct 2017
Total Revenues	-	-	-	-	-	-	-	-
Loss after income taxes	(288,843)	(437,190)	(783,056)	(447,138)	(364,865)	(509,493)	(539,038)	(548,265)
Comprehensive Income (loss) for the period	(496,843)	(229,954)	(759,864)	(362,241)	(156,727)	379,119	(973,524)	(279,450)
Loss per share (basic and diluted)	(0.00)	(0.00)	(0.01)	(0.00)	(0.00)	(0.00)	(0.01)	(0.00)
Total assets	6,607,600	6,026,885	6,282,229	6,690,503	7,260,277	6,998,570	6,845,946	8,419,110
Working capital (deficit)	(615,280)	(653,203)	(141,805)	92,323	(61,187)	(1,186,887)	(640,299)	(1,515,285)

The Company continues to monitor exploration and corporate expenses as resources become available. The decrease in total assets is due to the Company recording earn-in payments as reductions in the carrying cost of the exploration properties. Additionally, the issuance of convertible debentures has increased working capital by moving debt long-term.

The loss reported during the quarterly periods of Fiscal 2019 is in line with prior periods as management continues to monitor its ability to conduct exploration activities within the resource constraints of the period. Direct expenditures relating to exploration activities are capitalized on the statement of financial position in accordance with the Company's accounting policies.

EXPLORATION AND EVALUATION ASSETS

The Company has interests in five mineral properties as at 31 July 2019 and 2018:

	Oyadao South (OYS)	Oyadao (OY)	Banlung South (BLS)	Koan Nheak (KHN)	Andong Meas (ADM)	Total
Balance as at 1 August 2017	\$ 2,015,783	\$ 667,246	\$ 2,011,733	\$ 902,048	\$ 527,463	\$ 6,124,273
Additions	1,293,927	7,683	330,631	54,614	18,095	1,704,950
Funds received under option agreements	(1,924,001)	-	-	(68,760)	-	(1,992,761)
Adjustment on currency translation	68,569	33,397	115,904	43,935	26,995	288,800
Balance as at 31 July 2018	\$ 1,454,278	\$ 708,326	\$ 2,458,268	\$ 931,837	\$ 572,553	\$ 6,125,262
Additions	476,219	8,924	800,980	7,731	37,325	1,331,179
Funds received under option agreements	(678,463)	-	(999,490)	-	-	(1,677,953)
Adjustments on currency translation	17,091	9,791	30,848	12,826	8,327	78,883
Balance as at 31 July 2019	\$ 1,269,125	\$ 727,041	\$ 2,290,606	\$ 952,394	\$ 618,205	\$ 5,857,371

On 16 March 2017, the Company announced it had successfully renewed five exploration licenses for an initial three-year term with the option to extend a further four years. The exploration licenses include: Oyadao South (OYS), Oyadao (OY), Banlung South (BLS), Koan Nheak (KHN), and Andong Meas (ADM).

OUTSTANDING SHARES

As at 31 July 2019 and as at the date of this report, the Company had 105,980,543 common shares issued and outstanding. As at 31 July 2019 and as at the date of this report, the fully diluted amount of 121,458,293 includes exercisable warrants of 8,265,750 and exercisable options of 7,212,000.

LIQUIDITY AND FINANCIAL CONDITION OF THE COMPANY

The Company's working capital deficit (current assets less current liabilities) as at 31 July 2019 was \$615,280 compared with a deficiency of \$61,187 as at 31 July 2018.

Cash used in operating activities during the year ended 31 July 2019 totaled \$1,134,275 (31 July 2018 - \$2,046,466).

Cash provided in investing activities during the year ended 31 July 2019 totaled \$554,461 (31 July 2018 - \$264,703).

Cash raised in financing activities during the year ended 31 July 2019 was \$273,497 (31 July 2018 - \$2,135,463).

Actual future funding requirements may vary from those planned due to a number of factors, including the progress of exploration and development activity and foreign exchange fluctuations.

Over recent months substantial resources have gone into continuous disclosure improvements, which benefits shareholders, stakeholders and users of the financial statements and MD&A. At the same time, these demands and commitments have absorbed operational resources and impact cash flows.

It is our hope that with the improvements in place, additional internal resources are available to focus on fundraising and market awareness through investor relations and exploration.

Our working capital requirements are in flux due to the challenges mentioned in the previous note, but management is continuing to review and will communicate more fully and increase marketing as circumstances permit.

Below is a discussion of our expectation of a working capital deficiency, our ability to meet the obligations and thoughts on how we expect to meet the deficiency:

Management believes it will be able to raise equity capital as required, but recognizes the risks attached thereto.

Management has disclosed these as key assumptions and risks, as a key point in this MD&A.

Historically the capital requirements of the Company have been met by equity subscriptions (i.e., private placements, option exercises, warrant exercises).

Additional sources of working capital may come from the agreements with Emerald, Mesco, and Hommy discussed above. The Company continues to seek exploration and development partners on other properties in its inventory to further supplement revenue and working capital.

Although the Company has been successful in the past in obtaining financing, there can be no assurance that it will be able to obtain adequate financing in the future or that the terms of such financing may be favourable.

CAPITAL MANAGEMENT

The Company's objectives are to safeguard its ability to continue as a going concern in order to support the Company's normal operating requirements, to continue the development and exploration of its resource properties and to maintain a flexible capital structure which optimizes the cost of capital at an acceptable risk (Note1).

The Company has significant on-going cash requirements to meet its overhead requirements and maintain its mineral interests. The ability to raise capital in the future is required to continue on-going operations.

The Company manages its capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, the Company may issue new shares, issue new debt, acquire or dispose of assets or adjust the amount of cash and cash equivalents. In order to facilitate the management of its capital requirements, the Company prepares annual expenditure budgets that are updated as necessary, depending on various factors, including capital deployment, results from operations, results from the exploration and development of its properties and general industry conditions.

As at 31 July 2019, the Company's capital structure consists of the share capital and convertible debenture of the Company. The Company is not subject to any externally imposed capital requirements. In order to maximize ongoing development efforts, the Company does not pay dividends. Management reviews its capital management approach on an ongoing basis and believes that this approach, given the size of the Company, is reasonable.

During the year ended 31 July 2019, there were no significant changes in the processes used by the Company or in the Company's objectives and policies for managing its capital. The Company expects that based on the proceeds from the planned financing activities, sufficient capital resources are available to support further expansion and development of its resource assets.

OFF BALANCE SHEET TRANSACTIONS

The Company has no off-balance sheet arrangements.

RELATED PARTY TRANSACTIONS

Parties are considered to be related if one party has the ability, directly or indirectly, to control the other party or exercise significant influence over the other party in making financial and operating decisions. Related parties may be individuals or corporate entities. A transaction is considered to be a related party transaction when there is a transfer of resources or obligations between related parties. Transactions and balances with related parties not disclosed elsewhere in the Financial Statements are as follows:

RELATED PARTY DISCLOSURE – KEY MANAGEMENT PERSONNEL

Principal Position	Year	Remuneration or fees^{(i) (ii)}	Share based payments⁽ⁱ⁾	Amounts Payable⁽ⁱ⁾
Executive Chairman	2019	\$ 60,000	\$ 16,094	\$ 376,218

⁽ⁱ⁾ For the years ended 31 July 2019 and 2018.

⁽ⁱⁱ⁾ Amounts disclosed were paid or accrued to the related party.

The total key management personnel compensation during the year ended 31 July 2019 was \$339,891 (2018 - \$406,041), represented by fees of \$251,338 (2018 - \$380,041), and \$88,553 (2018 - \$26,000) in share-based payments.

On 23 September 2017, the Company received a non-interest bearing loan in the amount of \$55,000 from the Company's Executive Chairman. The loan was repaid during the year ended 31 July 2018.

On 13 July 2018, the Company received a convertible note totaling \$450,000 from the Company's Executive Chairman. The notes have a three-year term and bear interest at the rate of six percent per annum if paid in cash or ten percent per annum if paid by common shares. At the option of the holder, at any time prior to the end of the three-year term, the convertible notes and unpaid interest can be converted to common shares in the capital of the Company at \$0.25 per share. The notes also consist of 1,800,000 detachable warrants, each warrant can be exercised for a common a share at \$0.30 for a period of three years from the issue date.

The transactions with related parties were in the normal course of operations, which is the amount of consideration established and agreed to by the related parties. There are no set terms of repayment for the balances owed to the related parties.

PROPOSED TRANSACTIONS

The Company does not have any proposed transactions that have been approved by the board of directors. It continues to review and evaluate potential exploration properties.

RISK RELATED TO THE COMPANY'S BUSINESS

a) Exploration and Development Risk

The Company's properties in Cambodia are in early exploration stages and are without a known body of commercial ore. Exploration for mineral and oil and gas resources involves a high degree of risk, and few properties that are explored are ultimately developed into producing mines. Discovery of mineral deposits is dependent upon a number of factors, not the least of which are the technical skills of the exploration personnel involved and the capital required for the programs. The cost of conducting programs may be substantial, and the likelihood of success is difficult to assess. There is no assurance that the Company's mineral exploration activities will result in any discoveries of new bodies of commercial ore. There is also no assurance that even if commercial quantities of ore are discovered that a new ore body would be developed and brought into commercial production. The commercial viability of a mineral deposit once discovered is also dependent upon a number of factors, some of which are the particular attributes of the deposit (such as size, grade and proximity to infrastructure), commodity prices and government regulations, including regulations relating to royalties, allowable production, importing and exporting of

minerals, and environmental protection. Most of the above factors are beyond the control of the Company. The Company attempts to mitigate its exploration risk by maintaining a diversified portfolio that includes several metal commodity targets in a number of geologic environments. Management also balances the exploration risks through option and funding agreements with other companies.

b) Financial Markets

Presently, the Company obtains the majority of its working capital from other companies that are funding exploration on Angkor projects in order to earn an interest in the mineral rights. However, the Company will be dependent on the equity markets as its main source of operating working capital and funding for any advanced exploration and development activities that may be needed on its projects. The Company's capital resources are largely determined by the strength of the resource markets and by the status of the Company's projects in relation to these markets, and its ability to compete for investor support of its projects. Consequently, there can be no assurance that equity financing will be available to the Company in the amount required at any time or for any period or if available, that it can be obtained on terms satisfactory to the Company.

c) Metal Prices

The price of gold is affected by numerous factors including central bank sales, producer hedging activities, the relative exchange rate of the U.S. dollar with other major currencies, supply and demand, political, economic conditions and production levels. In addition, the price of gold has been volatile over short periods of time due to speculative activities. The price of other metals and mineral products that the Company may explore all have the same or similar price risk factors. The prevailing price of metals and speculation on future price of metals by the investing public can have strong impacts on the share prices of exploration companies like Angkor.

d) Currency Risk

The Company is exposed to the financial risk related to the fluctuation of foreign exchange rates. The Company operates in Cambodia and as such, a large portion of its expenses are incurred in U.S. dollars, which is the functional currency of Cambodia, and as such could cause a significant change in the results of operations, financial position or cash flows. The Company has not hedged its exposure to currency fluctuations as the Company considers these risks not significant.

e) Cash Flows

The Company currently has no revenue from mining operations; however, it does generate revenues from overhead recovery fees charged to partners for administration of project development work. If any of its exploration programs are successful and options of properties complete their earn-in, the Company may

have to provide its share of ongoing exploration and development costs depending on the specific agreement in order to maintain its interest or be reduced in interest to a royalty interest. Additional capital would be required to put a property into commercial production. The sources of funds currently available to the Company are the equity capital, or the offering of an interest in its projects to another party.

f) Credit Risk

Credit risk is the risk of an unexpected loss if a customer or third party to a financial instrument fails to meet its contractual obligations. The Company's cash, amounts receivable, and promissory note receivable are exposed to credit risk. The Company reduces its credit risk on cash by placing these instruments with institutions of high credit worthiness. The majority of the Company's cash is held through large Canadian and US financial institutions with a high investment grade rating.

g) Liquidity Risk

Liquidity risk is the risk that the Company will not be able to settle or manage its obligations associated with financial liabilities. In the management of liquidity risk, the Company maintains a balance between continuity of funding and the flexibility through the use of borrowings. Management closely monitors the liquidity position and expects to have adequate sources of funding to finance the Company's projects and operations. The Company is dependent on external financing and will be required to raise additional capital in the future to fund its operations.

h) Interest Rate Risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

The Company is exposed to cash flow interest rate risk on the variable rate of interest earned on its cash. The cash flow interest rate risk on cash is insignificant as deposits are either short term or pay interest at rates of 1.2% or less. The Company does not hold any other financial assets or liabilities which incur interest. The fair value interest rate risk on the Company's other assets and liabilities are deemed to be insignificant.

The Company has not entered into any derivative instruments to manage interest rate fluctuations; however, management closely monitors interest rate exposure and the risk exposure is limited.

i) Possible Dilution to Present and Prospective Shareholders

The Company's plan of operation, in part, contemplates the financing of its business by the issuance of securities and possibly, incurring debt. Any transaction involving the issuance of previously authorized but unissued shares of common stock, or securities convertible into common stock, would result in dilution,

possibly substantial, to present and prospective holders of common stock. The Company usually seeks partners to fund in whole or in part exploration projects. This dilutes the Company's interest in properties. This dilution is undertaken to spread or minimize the risk and to expose the Company to more exploration opportunities. However, it means that any increased market capitalization or profit that might result from a possible discovery would be shared with the partner. There is no guarantee that the Company can find a partner for any property.

j) Trading Volume

The relatively low trading volume of the Company's shares reduces the liquidity of an investment in its shares. Trading volumes fluctuate with market conditions and seasons. The Company attempts to reduce this risk by having multiple projects that are continually generating news and therefore investor interest and trading volume.

k) Volatility of Share Price

Market prices for shares of early stage companies are often volatile. Factors such as announcements of mineral discoveries or discouraging exploration results, changes in financial results, and other factors could have a significant effect on share price.

l) Competition

There is aggressive competition within the mining industry for the discovery and acquisition of properties considered to have commercial potential. The Company competes with other exploration and mining companies, many of which have greater financial resources than the Company, for the acquisition of mineral claims, leases and other mineral interests as well as for the recruitment and retention of qualified employees and other personnel.

m) Dependence on Management

The Company depends heavily on the business expertise of its management. There is risk to the Company's ability to execute its business plans if some or all of the current management team were to suddenly leave the Company or become incapable of performing their individual and collective responsibilities. The Company has mitigated the risk of its managers leaving for other companies through providing options to purchase Angkor stock. Some of the senior managers hold substantial share positions in Angkor and are motivated to remain with the Company. The Company has also developed the necessary depth such that it can replace senior managers with more junior staff if necessary. Despite the mitigation measures the Company still depends heavily on its current management.

n) Title Risk

Although the Company has taken steps to verify title to mineral properties in which it has an interest, in accordance with industry standards for the current stage of exploration of such properties, these procedures do not guarantee a clear title. Property title may be subject to unregistered prior agreements and regulatory requirements. The Company is not aware of any disputed claims of title.

o) Environmental

The Company's exploration and development activities are subject to extensive laws and regulations governing environment protection. The Company is also subject to various reclamation related conditions. Although the Company closely follows and believes it is operating in compliance with all applicable environmental regulations, there can be no assurance that all future requirements will be obtainable on reasonable terms. Failure to comply may result in enforcement actions causing operations to cease or be curtailed and may include corrective measures requiring capital expenditures. Intense lobbying over environmental concerns by nongovernmental organizations has caused some governments to cancel or restrict development of mining projects. Current publicized concern over climate change may lead to carbon taxes, requirements for carbon offset purchases or new regulation. The costs or likelihood of such potential issues to the Company cannot be estimated at this time.

p) Laws and Regulations

The Company's exploration activities are subject to extensive federal, state, and local laws and regulations governing prospecting, development, production, exports, taxes, labour standards, occupational health and safety, mine safety, and other matters in all the jurisdictions in which it operates. These laws and regulations are subject to change, and if they become more stringent, compliance can become more costly. The Company applies the expertise of its management, advisors, employees, and contractors to ensure compliance with current laws.

q) Mineral Resource Estimates

The estimation of reserves and mineralization is a subjective process and the accuracy of any such estimates is a function of the quality of available data and of engineering and geological interpretation and judgment. No assurances can be given that the volume and grade of reserves recovered and rates of production will not be less than anticipated.

FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

a) Financial instrument classification and measurement

Financial instruments of the Company carried on the Consolidated Statement of Financial Position are carried at amortized cost with the exception of cash which is carried at fair value. There are no significant differences between the carrying value of financial instruments and their estimated fair values as at 31 July 2019, due to the immediate or short-term maturities of the financial instruments.

The fair value of the Company's cash is quoted in active markets. The Company classifies the fair value of these transactions according to the following hierarchy:

Level 1 – quoted prices in active markets for identical financial instruments.

Level 2 – quoted prices for similar instruments in active markets; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations in which all significant inputs and significant value drivers are observable in active markets.

Level 3 – valuations derived from valuation techniques in which one or more significant inputs or significant value drivers are unobservable.

b) Fair values of financial assets and liabilities

The Company's financial instruments include cash, restricted investments, amounts receivable, and accounts payable and accrued liabilities, due to related parties and due to Hommy Resources. As at 31 July 2019, the carrying value of cash is fair value. The remaining financial instruments approximate their fair value due to their short-term nature.

c) Other risk

Market risk is the risk that changes in market prices will affect the Company's earnings or the value of its financial instruments. Market risk is comprised of other price risk, currency risk, and interest rate risk. The objective of market risk management is to manage and control exposures within acceptable limits, while maximizing returns. These market risks are evaluated by monitoring changes in key economic indicators and market information on an on-going basis and adjusting operations and budgets accordingly.

d) Credit risk

Credit risk is the risk of an unexpected loss if a customer or third party to a financial instrument fails to meet its contractual obligations. Credit risk for the Company is associated with cash, amounts receivable and promissory note receivable. Cash is held with reputable financial institutions.

The amounts receivable which represent financial assets include accounts receivable from third parties. Based on currently available information, the Company anticipates full recoverability of amounts due on account.

The Company has procedures in place to minimize its exposure to credit risk. Management evaluates credit risk on an ongoing basis including counterparty credit rating and activities related to accounts receivable and promissory note receivable and other counterparty concentrations as measured by amount and percentage.

e) Liquidity risk

Liquidity risk is the risk that the Company will not be able to settle or manage its obligations associated with financial liabilities. In the management of liquidity risk, the Company maintains a balance between continuity of funding and flexibility through the use of borrowings. Management closely monitors the liquidity position and expects to have adequate sources of funding to finance the Company's projects and operations. The Company is dependent on external financing and will be required to raise additional capital in the future to fund its operations.

The contractual undiscounted future cash flows of the Company's significant non-derivative financial liabilities are as follows:

	31 July 2019	31 July 2019
Accounts payable and accrued liabilities	\$ 620,118	\$ 573,611
Due to related parties	554,592	476,994
Due to Hommy Resources	378,549	-

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

The Company is exposed to cash flow interest rate risk on the variable rate of interest earned on its cash. The cash flow interest rate risk on cash is insignificant as deposits are either short term or pay interest at rates of 1.2% or less. The Company does not hold any other financial assets or liabilities which incur interest. The fair value interest rate risk on the Company's other assets and liabilities are deemed to be insignificant.

The Company has not entered into any derivative instruments to manage interest rate fluctuations; however, management closely monitors interest rate exposure and the risk exposure is limited.

f) Foreign currency risk

Foreign currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates.

The Company's major operating expenses and acquisition costs are denominated in U.S. dollars and a portion of the expenses of the Company are in Canadian dollars. The Company's corporate office is based in Canada and the exposure to exchange rate fluctuations arises mainly on foreign currencies which are the U.S. dollar.

The Company is exposed to foreign exchange risk. The Company has not entered into any derivative instruments to manage foreign exchange fluctuations; however, management monitors foreign exchange exposure and if rates continue to fall, management will look at entering into derivative contracts. Should the US dollar and Canadian dollar exchange rate have changed by 5% at the year end the impact to profit or loss would be +/- \$15,000. The Company's monetary assets and liabilities denominated in U.S. dollars are shown here in Canadian dollars:

(rounded '000)	31 July 2019	31 July 2018
Cash	\$ 333,000	\$ 612,000
Accounts payable	\$ (45,000)	\$ (310,000)

CRITICAL ACCOUNTING ESTIMATES

Significant assumptions about the future that management has made and other sources of estimation uncertainty at the financial position reporting date that could result in a material adjustment to the carrying amounts of assets and liabilities relate to but are not limited to the following:

- The recoverability of exploration and evaluation assets and the oil and gas license presented on the consolidated statement of financial position;
- The estimated useful lives of property and equipment which are included in the consolidated statement of financial position and the related depreciation;
- The inputs used in accounting for share-based payment transactions in the consolidated statements of comprehensive income and loss;
- Management's determination that there is no material restoration, rehabilitation, and environmental exposure, based on the facts and circumstances that existed during the period.

MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE YEAR ENDED 31 JULY 2019

APPROVAL

This MD&A reflects information available as at 26 November 2019. The Audited Consolidated Financial Statements and the MD&A were approved by the Board of Directors on 26 November 2019.

A CAUTIONARY TALE

This document contains “forward-looking information” which may include, but is not limited to, statements with respect to the future financial or operating performance of the Corporation, its subsidiaries and its projects, the future supply, demand, inventory, production and price of minerals, the estimation of reserves and resources, the realization of reserve estimates, the timing and amount of estimated future production, costs of production, capital, operating and exploration expenditures, costs and timing of the development of new deposits, costs and timing of future exploration, requirements for additional capital, government regulation operations, environmental risks, reclamation expenses, title disputes or claims, limitations of insurance coverage and the timing and possible outcome of pending litigation and regulatory matters.

Often, but not always, forward-looking statements can be identified by the use of words such as “plans”, “expects”, “is expected”, “budget”, “scheduled”, “estimates”, “forecasts”, “intends”, “anticipates”, or “believes” or variations (including negative variations) of such words and phrases, or state that certain actions, events or results “may”, “could”, “would”, “might” or “will” be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company and/or its subsidiaries to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Such factors include, among others, general business, economic, competitive, political and social uncertainties; the actual results of current exploration activities; actual results of reclamation activities; conclusions of economic evaluations; changes in project parameters as plans continue to be refined; future prices of resources; possible variations of ore grade or recovery rates; failure of plant, equipment or processes to operate as anticipated; accidents, labour disputes and other risks of the resource industry; political instability, insurrection or war; delays in obtaining governmental approvals or financing or in the completion of development or construction activities. Although the Corporation has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results to differ from those anticipated, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements.

Respectfully submitted

On Behalf of the Board of Directors
